New Web Site

What should be proposed name of your website?

What and how much email addresses you want

What is your Primary Business Type it will help us to make your professional look of your web design.

What is the status of your website (Static or Dynamic?)

It will help us to better understand your web site. How you want the development type for your new born or pre made web site.

What you want about your web site Static or Dynamic?

Static means you can not change the contents, status of your web site when it's live and running. Generally, for a static web site people have to download the web pages of their sites and then edit and re-upload their data so users can see their change.

But Dynamic Web sites can be changed any contents while they are running and working. You can create menus of you own type, change and add new contents, edit old ones. You can change the banners of your site and if you want to make your site shopping portal, you can easily add products as much as you want with product specifications like name, color, description etc.

You can even upload movies and video or audio and make your site a video and audio portal.
